## DETAILED ACTION

### *Examiner's Statement of Reasons for Allowance*

1. Claims 26-31, 38-41, 46-49, 55-60, 62, 63 and 65 are allowed over prior art.
2. This action is in reply to applicant's correspondence of 14 December 2006.
3. The following is an examiner's statement of reasons for the indication of allowable claimed subject matter.
4. As per claims 26, 38, 46, 55 60 and 63 generally, prior art of record, Olden, U.S. Patent 6,460,141 B1, fails to teach alone, or in combination, other than via hindsight, at the time of the invention, the features as discussed and remarked upon in the response of 14 December 2006 to office action of 9/7/2006.

Specifically, (as per claim 26, for example) prior art dealing with distinct authorization and authentication systems used for open system network resources access, whereas token/certificate are used for associated resource attribute/user identification, is generally known to exist per se, (i.e., Mwakalinga, J., Rissanen, E., Muftic, S., 'Authorization System in Open Networks Based on Attribute Certificates', IITC 2003 conference proceedings, ISBN 955-8974-00-5, 2003, pp59-67, <http://www.dsv.su.se/~matei/courses/3%20-%20i1272/L3b.pdf>). However, nowhere in the prior art is found collectively the *italicized* claim elements (i.e., the emphasis on the configuration of the internal/external authentication claim elements insofar as they are utilized/relied upon for the resource/user authorization/authentication via the resource access request sequence), *at the time of the invention*; serving to patentably distinguish the invention from said prior art;

"A method for providing access to resources, comprising the steps of:

receiving, at *an access system*,

*configuration* information for

a first *resource*,

said *access system* provides for

*using of* one or more

*internal authentication* systems and

said *access system* provides for

*reliance on* one or more

*external authentication* systems,

said *configuration* information provides

an *indication* to said access system

to *rely on*

a first *external authentication* system for

said first *resource*;

receiving a first *request from*

a first *user for*

said first *resource*;

*relying on* said first *external authentication* system for

authenticating

said first *user*; and

*performing, at said authorization system,*

*authorization* services for

Art Unit: 2136

said first *request*;

wherein said *authorization* services comprise

*determining* whether said first *user*

is *authorized to access*

said first *resource*; and

wherein *authenticating* said first *user* comprises

*verifying an identity of*

said first *user*.”.

5. Dependent claims 27-31, 39-41, 47-49, 56-59, 62 and 65 are allowable by virtue of their dependencies.
